

## Foreign Conversion

Have you received a videotape or DVD from someone in Europe or Asia and found out it wouldn't play on your player? That's because Europe and Asia use different television standards called PAL and SECAM. We use NTSC.

Unfortunately, all three systems are incompatible with each other. But fear not... Solid Gold Video can transfer from or to each of the different standards. So if you want to send your home videos to your family abroad, we can convert them to PAL or SECAM for you. We know what system is used in every country. Just ask us. We convert from and to all formats and standards, and can convert from VHS to DVD, VHS to VHS or DVD to DVD.

Please call for pricing.
